SCREEN TABLES FOR NON-PRIOR-SERVICE ACCESSIONS FOR FY 1978 – 1984

Aline Quester

Naval Planning, Manpower, and Logistics Division

ABSTRACT

This paper reports on the construction of an interactive, historical database for recruit survival probabilities. This FY 1978-1984 base includes accession and monthly survival information for non-prior-service recruits by accession program, gender, shipment mode, educational category, mental group, and age. An important finding is that for recruits who are otherwise identical, survival is worse if they are shipped within the month that they signed their initial contract.

INTRODUCTION

With the advent of the All-Volunteer Force, new interest emerged in how the characteristics of recruits related to the probability that they would complete their enlistment contract. The Center for Naval Analyses (CNA) was a prime contributor to the Navy's understanding of how recruits' characteristics related to their first-term attrition. In work with the FY 1973 cohort and later with the FY 1977 cohort, CNA developed Success Chances for Recruits Entering the Navy (SCREEN) scores for the Navy (see [1-4]). These scores, defined by personal characteristics like gender, race, educational status, age, and mental group, provide the probability that a recruit will successfully complete (survive) a specified period of service. Currently the Navy uses SCREEN scores only for male recruits. Scores currently in use are shown in table 1; derived from experience with the FY 1977 recruit cohort, they provide the probability that males with the specified characteristics will complete 1 year of service. Male recruits with scores lower than 70 are not permitted to enlist.

This paper reports on an effort to update the survival analysis to more recent recruit cohorts. Tasked as part of the analysis to be performed in the Enlisted Manpower Personnel and Training Study, the Navy's interest in this work had several dimensions. First, verification was sought on the continuing validity of the SCREEN scores currently used by the Navy (estimated with the FY 1977 cohort).¹

Second, there was interest in whether survival probabilities were affected by the overall recruiting climate for the particular recruit cohort. The late 1970s, for example, were extremely difficult recruiting years. Low civilian unemployment rates and poor (or non-existent) military pay increases combined to create an environment in which military service was not popular and overall accession goals were not always met. 1982 and 1983 stand in sharp contrast: substantial military pay increases and high civilian unemployment rates created an environment in which the Navy met its accession goals and improved the overall quality of its recruits.

The final interest was more operationally motivated. Could a SCREEN-type database be created that would be easy to access, up-to-date, and responsive to user queries? Here the primary interest was for quick-response capability. Such a database was created for FY 1978 to FY 1984 non-prior-service recruits. After an explanation of that database, the paper will proceed to an analysis of recruit attrition.

1. The survival probabilities for the FY 1977 cohort were estimated by Cox regression techniques, as described in [5]. These techniques are used to construct synthetic cohorts.

TABLE 1

SUCCESS CHANCES FOR RECRUITS ENTERING THE NAVY (SCREEN)

| AFQT ^a score | Age | Education level | | |
|-------------------------|-------|---|--|---------|
| | | High school diploma graduate ^b | GED/CPT home study course ^b | Neither |
| 95-100 | 17-19 | 93 | 85 | 77 |
| | 20+ | 90 | 82 | 74 |
| 67-84 | 17-19 | 91 | 83 | 76 |
| | 20+ | 88 | 79 | 71 |
| 38-66 | 17-19 | 88 | 80 | 73 |
| | 20+ | 84 | 75 | 67 |
| 19-37 | 17-19 | 83 | 75 | 68 |
| | 20+ | 78 | 70 | 62 |
| 17-18 | 17-19 | 75 | 68 | 62 |
| | 20+ | 69 | 61 | 56 |

Minimum SCREEN
eligibility

a. Armed Forces Qualification Test.

b. High school diploma graduates and high school non-diploma graduates (GED/CPT) are defined in paragraph 1-I-7a of the Navy Recruiting Manual.

SOURCE: Navy Recruiting Manual.

THE SCREEN DATABASE

Earlier work at CNA had built a non-prior-service accession data set for all recruits in the FY 1978-FY 1984 time period [6]. Composed of 546,569 observations, this file contained a recruit's history from the date he signed his initial enlistment contract¹ to the date he left the Navy (or June 1985 if he was still in the Navy in June 1985).² The problem here was how to organize these data so that survival probabilities for the different subgroups of recruits could be quickly tabulated and displayed in a clear manner. Because previous work had generally displayed survival probabilities by educational status, mental group, and age category, it was decided to continue this general format. Tables would be generated which organized survival probabilities by these three characteristics.

The next set of decisions involved what characteristics should be provided to the user as possible selections for the SCREEN table. Fiscal year of recruit cohort (or a combination of years), program enlisted for (or a combination of programs), gender (or both genders), and shipment mode (shipped within month, shipped in future month, or both) were selected as the criteria that would be available for user specification. Additionally, of course, the user specifies the number of months for which he desires the survival probability. An example of an iterative session and the resultant SCREEN report follows.

Constructing a SCREEN Report

The SCREEN report program works as described below. User responses are indicated in boldfaced type.

ENTER SELECTION FOR REPORT

YEAR SELECTION

- 1 - Year 78
- 2 - Year 79
- 3 - Year 80
- 4 - Year 80
- 5 - Year 82
- 6 - Year 83
- 7 - Year 84

-
1. See [7] for a discussion of contract attrition, attrition that occurs prior to the recruit's actually accessing into the Navy.
 2. For about 4 percent of the "confirmed shipper" observations reported in Navy Recruiting Command's PRIDE system, there were no records on the Enlisted Master Record File. These observations were not included in the data set; they represent either very early attrition or errors in the "confirmed shipper" field in the PRIDE data.

How many years would you like to select? (9 for all): 2

Enter first year selection: 6

Enter second year selection: 7

SEX SELECTION

- 1 - Male
- 2 - Female
- 9 - Combine both

Enter the sex you want: 1

PROGRAM SELECTION¹

- 1 - Program 'SG'
- 2 - Program '5Y0'
- 3 - Program 'NF' 'ATF' 'AEF'
- 4 - Program 'AM'
- 5 - Program 'ATP'
- 6 - Program 'SF' (GenDet after 6 months)
- 7 - Program 'SF' (rated before 6 months)
- 8 - All other programs

How many programs would you like to select? (9 for all): 1

(Responding with a 9 combines program categories 1 through 7 only. If the miscellaneous category 8 is to be included, the user responds with an 8 and then explicitly types in all eight program numbers.)

Enter first program selection: 1

DEP SELECTION (Delayed Entry Program)

1. 'SG' stands for School Guarantee (4-year obligor recruits promised A-school after recruit training); '5Y0' stands for school-guaranteed ratings that have 5-year obligations; 'NF' (Nuclear Field), 'ATF' (Advanced Technical Field), and 'AEF' (Advanced Electronic Field) stand for school-guaranteed 6-year obligations; 'AM' stands for 3-year active obligors (2-years Selected Reserve) who are school guarantees; 'ATP' stands for 3-year General Detail (GenDet) obligors; 'SF' (GenDet after 6 months) stands for 4-year Seafarer obligors who are not promised A-school and did not get selected in recruit training for A-school; 'SF' (rated before 6 months) stands for 4-year Seafarer obligors who presumably got "picked up" in recruit training for A-school. Finally, the residual category (8) includes the other smaller programs.

- 1 - Direct Shipper (shipped within same month)
- 2 - DEP
- 3 - Combine both

Enter DEP selection: 2

SURVIVAL MONTHS SELECTION

Valid entries are from 0 to 09¹
Enter survival months: 6

Your report can be found at REPORT01.DAT²

Would you like to produce another report (Y or N)? N

Table 2 illustrates the results produced by these commands. The format provides both the number of accessions in the categories selected as well as the fraction remaining (survival percent). Overall, 91 percent of these recruits survived to 6 months. Survival probabilities by education range ranged from 84 percent for non-high school graduates to 86 percent for those with General Education Diplomas (GEDs) to 91 percent for High School Diploma Graduates (HSDGs). By mental group, the probabilities range from 92 percent (MG1) to 83 percent (MG4BC).³ Within the upper mental group (MG1-MG3U), survival probabilities differ by only one percent (92 percent for MG1, 91 percent for MG2, and 92 percent for MG3U).⁴ As has been observed in previous SCREEN tables, survival probabilities vary considerably by educational category with diploma graduates consistently exhibiting higher survival rates. Additionally, survival probabilities decline by age. As illustrated in the lower portion of the table, overall survival probabilities of 92 percent for 17- to 18-year-old recruits decline monotonically by age to 87 percent for recruits 23 years of age and older.

SURVIVAL PROBABILITIES

Differences by Recruit Cohort Year

Tables 3 through 9 show 9-month recruit survival probabilities for recruit cohorts in each of the 7 fiscal years. (Nine months was chosen

-
1. The software determines the maximum number of months for which survival can be calculated. In this example, for the FY 1984 cohort, the maximum survival months is 9.
 2. From 1 to 99 reports can be produced in one session.
 3. Mental Group 5 (13 recruits over a 2-year period) are not supposed to be able to enter the Navy.
 4. All MG categories are normed to the World War II reference population. Individuals in the 49th percentile are counted as MG3U.

for the comparison period as 9 months is the maximum survival period currently available for the FY 1984 recruit cohort.)¹ There is some variety over the years in 9-month recruit survival rates.

In FY 1979, when the civilian unemployment rate was low and military pay relative to civilian pay was also relatively low, the Navy experienced both difficulties in recruiting and relatively low 9-month survival rates (86 percent). In contrast, in the peak recruiting year of 1983, 9-month survival was 90 percent. Overall, this 4-percent difference in 9-month survival rates translates into a loss of about 3,000 sailors.

Some of this variance is explained by the different mixes of recruits obtained in the different fiscal years, with the most important characteristic being the percent of recruits that are high school diploma graduates (HSDGs). The average 9-month survival rate for HSDGs in these years is 90 percent (versus 82 percent for GEDs and 83 percent for nongraduates). Some of the variance in survival rates, however, remains differences among the years, with FY 1979 recruits having lower survival rates in practically all categories. The fact that, except for FY 1979, there is not too much variation in recruit survival by entry year is probably encouraging since the recruiting environment in the late 1980s will probably be more akin to that of the late 1970s (a weak recruiting environment) rather than the early 1980s (a strong recruiting environment).

Differences by Enlistment Program

Table 10 illustrates broad categories of 30-month survival probabilities by enlistment program for recruits that entered the Navy in FY 1982. (Appendix A provides the full SCREEN tables produced by the SCREEN report program.)

Several interesting observations can be made about the overall differences on 30-month survival rates by enlistment program. The first is that the longer enlistment programs (the 5-year obligors and the 6-year obligors (NF, ATF, and AEF)) have higher survival rates than the programs with shorter enlistment periods. The only exception to this comes from the small number of GenDet recruits in the SeaFarer (SF) program who are selected in boot camp, apparently because they show promise, to go to A-school. Not surprisingly, these recruits, about

1. Available data limit survival probability calculations to 9 months if comparisons are to be made through FY 1984; recruits who entered in the last month of FY 1984 (September 1984) would have served only 9 months by June 1985, the last quarterly Enlisted Master Record file available when these analyses were performed.

a. This first number is the number of recruits. The number in parentheses is the percent of recruits surviving.

8 percent of the SF recruits in FY 1982, have high survival rates.¹ Another observation is that 17- to 18-year-old recruits who are not HSDGs do not survive very well.

Differences by Gender

Tables 11 and 12 illustrate 21-month survival probabilities for recruits that entered in the School Guarantee Program in FY 1983. Overall survival (83 percent for males and 82 percent for females) does not appear very different. These overall totals, however, are somewhat misleading as females are overwhelmingly HSDGs; within educational and mental group categories, males have marginally better survival probabilities than females.

Differences by Shipment Mode

Table 13 shows the differences in 30-month survival probabilities for recruits who shipped in FY 1982 within the month of their initial contract and for recruits who shipped in a future month (1 to 12 months later).² Even within the educational category, recruits who ship from the DEP (as opposed to those who ship within the month) have higher survival probabilities. For School Guarantee recruits who are HSDGs, the 30-month survival rate for those who ship within the month is 72 percent; for the recruits who shipped from the DEP, the survival rate is 80 percent. For 5-year obligors, the differences are even more striking: 70 percent versus 83 percent.

This finding is important. It suggests that individuals who have had more time to "think about their decision to enter the Navy" are more likely to make a successful adaption to Navy life. Moreover, the finding reinforces the concern evinced today as the Navy's DEP shrinks and more recruits are shipped within the month they sign their contract.

Table 14 presents similar data for FY 1984 recruits. Here the survival comparisons are for 9 months; again, significant survival differences are found between those who ship within the month they sign

1. It may be worthwhile to investigate this phenomenon more fully. In the FY 1978 to FY 1984 period, SF recruits who get rated within 6 months have persistently higher survival rates than School Guarantee (SG) recruits. Depending on how important an SG is for recruiting, it may be worthwhile to bring in more SF recruits with the plan of selecting some of them for school in boot camp.

2. This was calculated from the difference between Pay Entry Base Date (PEBD) and Active Duty Service Date (ADSD) since recruits in this period obtained longevity credit from the date they signed their contract. In FY 1985 this was changed; for current USN non-prior-service recruits, PEBD equals ADSD.

their contract and those who ship later. (The full tables are in appendix B.)

Differences by Educational Category

By far the most important survival characteristic for a potential Navy recruit is his educational category. This more recent work with FY 1978 through FY 1984 recruit cohorts simply reaffirms earlier SCREEN findings: high school diploma graduates have significantly higher survival rates. Given that certificate graduates are supposed to have absorbed the same quantity of formal schooling as diploma graduates, the finding appears to be that a diploma "signals" something else about the recruit other than formal learning, perhaps simply that the recruit is more likely to be a completer.

While the former finding was well recognized within the Navy, the latter was not. As diploma graduates become more difficult to recruit, the findings here suggest that it may be cost effective for the Navy to increasingly use the Delayed Entry Program as an additional screen for nondiploma graduates.

SUMMARY

The interactive SCREEN database described in this study allows the user to quickly access survival information by fiscal year, accession program, recruit gender, shipment mode, educational category, mental group category, and age. Accessed by Navy personnel in OP-13, as well as by CNA analysts, it can provide historical information for reports as well as insights into how the Navy can better screen its recruits. Perhaps the most important findings are that diploma graduates continue to have the best survival rates and that, for otherwise identical recruits, the Navy survival rate is lower if they ship within the month.
